TECHNICAL SKILLS

Languages: Python, Java, Kotlin, JavaScript, TypeScript, C++, SQL

Frameworks/Libraries: React, Next.js, Angular, Node.js, Express.js, Spring Boot, Flask, FastAPI

Developer Tools: Git, GitHub, GitLab, Docker, AWS, Google Cloud Platform

Databases: PostgreSQL, MySQL, SQLite, MongoDB, Firebase

EDUCATION

University of Ottawa

Ottawa, ON

BASc Software Engineering (CO-OP)

Sept. 2022 – Dec 2026

- **Coursework:** Data Structures and Algorithms, Software Quality Assurance, Operating Systems, Software Construction, Software Design and Architecture, Advanced Programming Concepts With C++

EXPERIENCE

Software Engineer Intern

May 2025 – Present

Natural Resources Canada

Ottawa, ON

- Built a Python microservice that initializes production tracking and triggers entry-point microservices, serving as the starting point for images in the GeoAI pipeline.
- Developing a Python microservice that monitors a PostGIS database for images needing flatfile creation, extracts geospatial data, generates JSON files, uploads them to AWS S3, and updates records for 1000+ images in under 60 seconds.
- Refactored and updated existing microservices to add new features and address changes in requirements.
- Optimized GitLab CI/CD workflow and Docker configuration to publish internal Python packages to the GitLab PyPI registry, streamlining dependency management across 20+ microservices.

Software Engineer Intern

May 2023 – Sept. 2023, Jan 2024 – Apr. 2024

Canada Revenue Agency

Ottawa, ON

- Developed 10+ reusable Angular components that were integrated into a shared component library, enabling teams to efficiently digitalize CRA forms.
- Built 5+ Angular pages to showcase the component library, demonstrating functionality and use cases.
- Implemented REST APIs in a Java Maven project to validate and transform user inputs for PDF generation.
- Wrote JUnit tests on the library's input validators identifying issues in over 70% of the validators.

Development Team Lead

Jan. 2025 – Present

Software Engineering Student Association | sesa-aegl.ca | [source](#)

Ottawa, ON

- Leading a team of 5 developers in building and maintaining the SESA website with Next.js and TypeScript.
- Built backend services for the resources page, centralizing 200+ academic resources into a structured, searchable repository, streamlining access and usage for 500+ students.
- Developed 5 responsive pages and 20+ reusable components, ensuring consistency with design specifications.

PROJECTS

TalentSync | React, TypeScript, Python, Groq (Llama 3), AWS (Lambda, S3, ECR, Cognito) | [TalentSync](#) | [source](#)

- Built a Chrome extension that uses Llama 3 to scores your resumes against job listings, enhancing job search.
- Designed a serverless architecture with AWS Lambda, S3, and API Gateway to enable scalable job scraping and resume matching via Playwright and Groq on the cloud, securing API endpoints with Google OAuth and Cognito.
- Containerized Lambda functions with Docker and deployed them to AWS via Amazon ECR.

TeeChat | React, Node.js, Express.js, Socket.IO, MongoDB, AWS EC2 | teechat.chat | [source](#)

- Developed a real-time chat application with 25 monthly active users, enabling seamless instant messaging.
- Used MongoDB and Socket.IO for real-time data management, securing passwords with one-way hashing.
- Implemented a complete JWT auth flow that handles logins, token management, and authorized Socket.IO connection.

StudySync | Angular, Spring Boot (Kotlin), PostgreSQL, Docker

- Engineered backend services with Spring Boot, implementing secure JPAs, DAOs, and REST APIs for reliable data persistence and robust client-server communication, containerized with Docker alongside PostgreSQL for local development.
